Gothenburg, Cozad, Brady 6th graders attend

The Monsanto Learning Center was a hub of knowledge last Thursday as sixth graders learned everything from how much a baby calf weighs to how to make an aquifer to how it feels to be blind or disabled.

Students from Gothenburg, Cozad and Brady attended the annual Progressive Agriculture Safety Day for demonstrations and discussions about groundwater, tool, water, home and fire safety; electrical, disability and meth awareness; first aid and more.

One group spun a wheel that stopped at interesting questions such as how much does a baby calf weigh.

One sixth grader, who guessed around 75 pounds, won a prize.

Nearby, other students created mini aquifers.
